INTRODUCTION: The volume of attention to the atom bomb continues to dwindle  
 in Soviet as well as non-Soviet broadcasts. In general old themes are repeated, with  
 the exception of the following items:

MORE NEED FOR POINT FOUR: A Burmese commentator argues that the new atomic development  
 increases the tendency of "wavering" areas, such as Burma, to align themselves with  
 Communism; he feels that an accelerated Point Four program would counteract this tendency.

INSPECTION IS ESSENTIAL: One of the very few discussions of the practical aspects of  
 atomic-energy control is by the French writer Pertinax. He argues that international  
 inspection must be very thorough, including the right of the inspectors to "fly over  
 the territory of a state from one end to the other, the airplane being their inseparable  
 companion." Even Pertinax, however, does not raise the question of international owner-  
 ship as distinguished from inspection.
